

AI SCRIBE PILOT PROGRAM

Helping your provider focus on you

Health PEI

How does it work?

A scribe makes a temporary audio recording and transcript of the medical discussion.

Creates a draft summary “note” based on your medical conversation.

The note is reviewed, edited and saved to your electronic medical record by your health care provider.

What is the benefit?

The scribe helps your health care provider spend more time focused on you instead of taking notes to ensure that important details are accurately recorded.

The scribe tool will not make decisions about your care, it only summarizes the medical conversations with your health care provider.

Before using the scribe...

Your health care provider and/or care team will explain what the technology does, what data is being collected and how it will be used. They will also request your consent prior to using the scribe. Please note that you can ‘opt out’ of using the AI scribe during your visit, and it will not impact the quality of care that you will receive.
