ATTENTION: ALL FACILITIES UPDATES OCCURRING WITHIN THE CIS THE WEEK OF - FEBRUARY 22ND, 2021

The following solution areas have updates: Order Sets - Page 2 PowerChart - Page 2 FirstNet - Page 3 Lab - Page 4

UPCOMING EVENTS

There are no upcoming events in CIS.

Health PEI CLINICAL INFORMATION SYSTEMS

Order Set Update:

The following order sets are new and will be replacing Medical Directives of similar names in CIS. They are written to match the new provincial Medical Directives.

Medical Directive Tetanus Prophylaxis in Wound Management

Medical Directive Abdominal Pain

Medical Directive Abrasions and Minor Puncture Wounds

Medical Directive Chest Discomfort and Suspected Referred Cardiac Pain

Medical Directive Suspected Fracture or Dislocation

Medical Directive Fever and Pain Control for the Pediatric Population

PowerChart Update:

New Physician Progress note - Rehabilitation Medicine Progress Note

If the Documents tab is sorted by TYPE, it will post under the folder for Progress Notes.

 Nursing/Allied Health-Text Progress Notes Rehabilitation Medicine Progress Note 2021-Feb-16 	- "Testing Rehabilitation Medicine Progress Note"

Inpatient Consultation renamed from Physiatrist Consultation to "Rehabilitation Medicine Consultation"

New source added to the BPMH compliance for documenting End of Life

To be used in EOL care when asking patient/family home medication questions isn't appropriate or

pertinent to the current situation. The option is 'Not assessed - end of life care'

Not taking Not taking (held prior to surgery) Pervice Investigation				

Update to PRN Reason

Please note: "Stridor" has been added as a PRN reason to the PRN drop down list.

Health PEI CLINICAL INFORMATION SYSTEMS

FirstNet Update:

Tracking patients in FirstNet will be changing from the Tracking Shell to ED LaunchPoint on March 30, 2021. Results Callback and ED Real Time Dashboard will be implemented in FirstNet for nursing and physicians.

ED LaunchPoint provides the ability to redesign the way you interact with FirstNet. The solution is more intuitive and helps you be more efficient. This new, standard design and simplified view calls attention to critical information for clinicians.

Tracking Shell (Current View)

ED LaunchPoint (New View)

Results Callback

The Results Callback worklist tracks patients requiring follow-up, pushes clinical information from the encounter to the user, and improves communication between all of the clinicians involved in the callback

ED Real Time Dashboard

ED Dashboard displays real-time data for the emergency department. The dashboard pushes information to managers and other users to support bed management, staffing, and other decisions that ultimately drive throughput and patient satisfaction. Information is displayed in a component-based layout on a single display. You can select each component to view specific patient-level information.

Lab Update:

There is a new PowerChart/FirstNet/SurgiNet Alert for patients where the Blood Transfusion Service Lab may have difficulty providing crossmatch compatible units in a timely manner.

This alert will fire when the patient's chart is opened to notify the ordering provider that the patient has a rare blood type. The Blood Transfusion Lab should be notified as soon as possible even if a crossmatch is not being presently considered because there may be difficulty in providing crossmatch compatible RBC units. The alert will fire twice per day and will not fire if the Blood Transfusion Lab has an in date sample.

Liver Function Lab Order Powerplan change:

The Liver Function Lab Order Powerplan that contained the two order sentences, Routine and AM Next Day, will be split into two separate powerplans for more convenient ordering.
