WEEK OF - JUNE 28TH, 2021

The following solution areas have updates:

Order Sets - Page 2

PowerChart - Page 2

Labs - Page 3

UPCOMING EVENTS

There are no upcoming events in CIS.

Privacy Matters Corner...

Don't forget that it is important to only access patient information that is pertinent to your job and at the time it is needed. Each time you log into CIS, regardless of your role or access permissions, your username leaves a footprint of what you are accessing in CIS. The system keeps an audit trail of your entry into the chart along with what you are accessing and when. It also records who has documented each piece of information in the chart. Always ask yourself "Do I need to know the information I am accessing in order to provide care or perform my work duties at this time?"

Order Set Update:

GENSURG MED GI BLEED & ED GI BLEED Order Sets - Octreotide infusion rate change from 25 mcg/hr to 50 mcg/hr

PowerChart Update:

Braden and Conley - Every 7 day assessment have been reinstated. The task will fire to your task list 7 days after that last documented result.

Obstetrics Shift Summary & Infant Shift Summary (New Forms) - are available in the Ad Hoc Maternal Documentation folder.

Care Compass Reminders -

- Microbiology (culture) results will not post to CareCompass. Right click on the Quick Links to open Result Review
- Patient list Display. CareCompass opens to the list at the top of your Active list

- Refresh Rate: The Smart Refresh occurs every 3-7 minutes. **NOTE:** Opening the New order/new results window, charting a task, viewing the activity list will cause the Smart Refresh to reset to zero. The Smart Refresh does not update the Manual refresh counter in the upper right hand corner of the page.
