## PowerChart Update: (continued)

New Form associated to the Adult Opioid Withdrawal Syndrome Management Order Set - The order will post as a task on the task list. Results will post to the Assessments Tab.

### Clinical Opiate Withdrawal Scale

For each item, select the response that best describes the patient's signs or symptom. Rate on just the apparent relationship to opiate withdrawal.

For example, if heart rate is increased because the patient was jogging just prior to assessment, the increased pulse rate would not add to the score

Resting Pulse Rate (Beats per minute). Measured after patient sitting or lying for one minute

GI Upset over last ½ hour

- Pulse rate 80 or below
- Pulse rate greater than 120
- Pulse rate 81-100
- Pulse rate 101-120

- No GI symptoms
- Vomiting or diarrhea
- Stomach cramps
- Multiple episodes of diarrhea or vomiting
- Nausea or loose stool
