Issues with POC Glucose field on the MAR charting window

It has been brought to our attention that there is the potential for the POC Glucose field to be blank on the MAR charting window even after the POC Glucose has been obtained. If this occurs, the [Trend](#) option may be not accurate.

Until further notice: the source of truth for POC Glucose is the **Diabetes Management Tab**. Please check there and transcribe the correct POC Glucose result (based on date and time) into the MAR Glucose Verify box.

In this example, the POC Glucose result was 14.8, nothing appeared in the POC Glucose Result Window. Staff had to go to the **Diabetes Management Tab** and transcribe the result into the MAR Glucose Verify box.
