

Med List Tab

Medications is divided into 3 categories:

Inpatient Medications: medications ordered for the current encounter.

Prescriptions: medications entered into the system when physicians prescribe medications electronically on discharge

Medications Documented by Hx: home medications entered by nursing, physicians or Pharmacy staff

The screenshot displays the 'Medication List' interface. On the left, a 'View' sidebar contains a list of filters: Admit/Transfer/Discharge, Patient Status, Diet, Activity, Vital Signs, Patient Care, Laboratory, Diagnostic Tests, Diagnostic Imaging, Consults, Therapy Orders, Scheduling, and Surgical Procedures. The main area shows a table of medications with columns for Status, Last Updated, Order Name, and Details. The table is filtered to show 'All Active Medications'. The medications are categorized into three sections: Inpatient, Prescription, and Documented Medications by Hx. Three red arrows point from the 'View' sidebar to the 'Inpatient', 'Prescription', and 'Documented Medications by Hx' sections of the table.
