

Documenting on Intra-op documents:

- Documents are divided into sections
- Use the Next or Previous button to navigate between pages. This triggers the page to be automatically saved.

- There is the ability to see how many pages are in a section. Clicking on the number will select that page. Using this option **will not** automatically save data entered.

Functionality within a section:

- Some section will have pre-populated information
- Action options are available depending on data entered
 - Add – Allows you enter new data
 - Modify – Allows you to update existing data
 - Remove – Allows you to delete information entered on a segment
 - Clear – Allows to clear information in a field
