General Laboratory

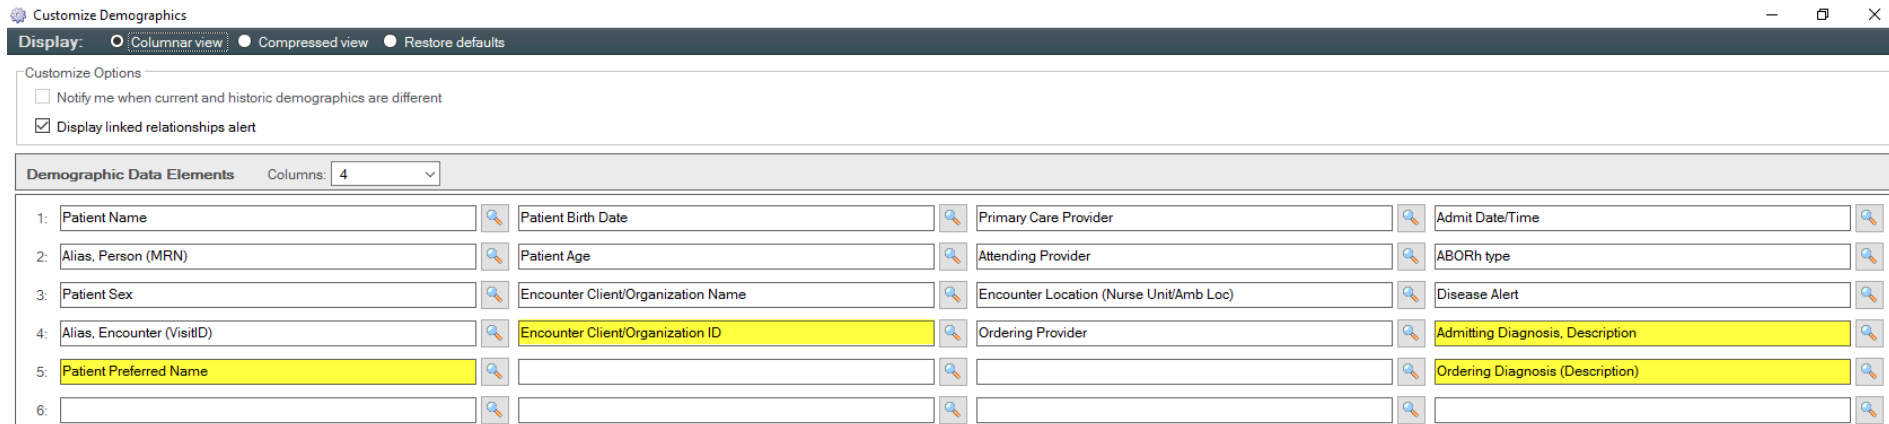

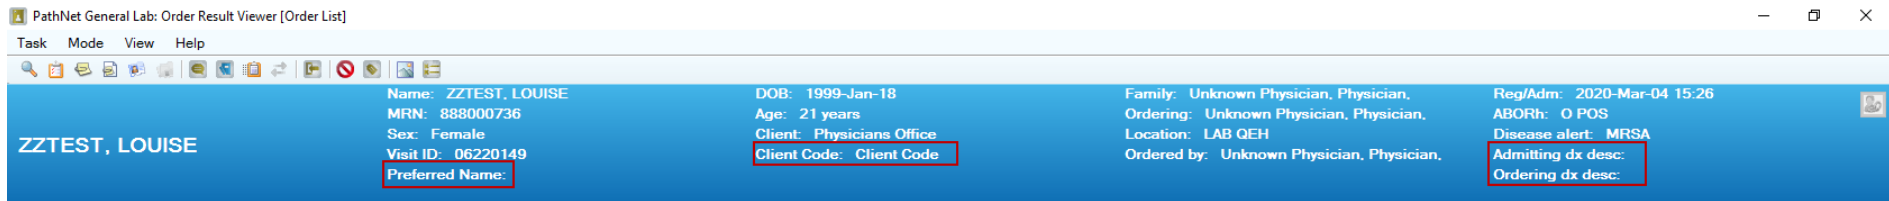

Corrections & Enhancements

Order Result Viewer

Demographic Customization Update

With this enhancement, the following elements have been added to customize demographics:

- Admitting Diagnosis Description
- Encounter Client/Organization ID
- Ordering Diagnosis Description
- Patient Preferred Name

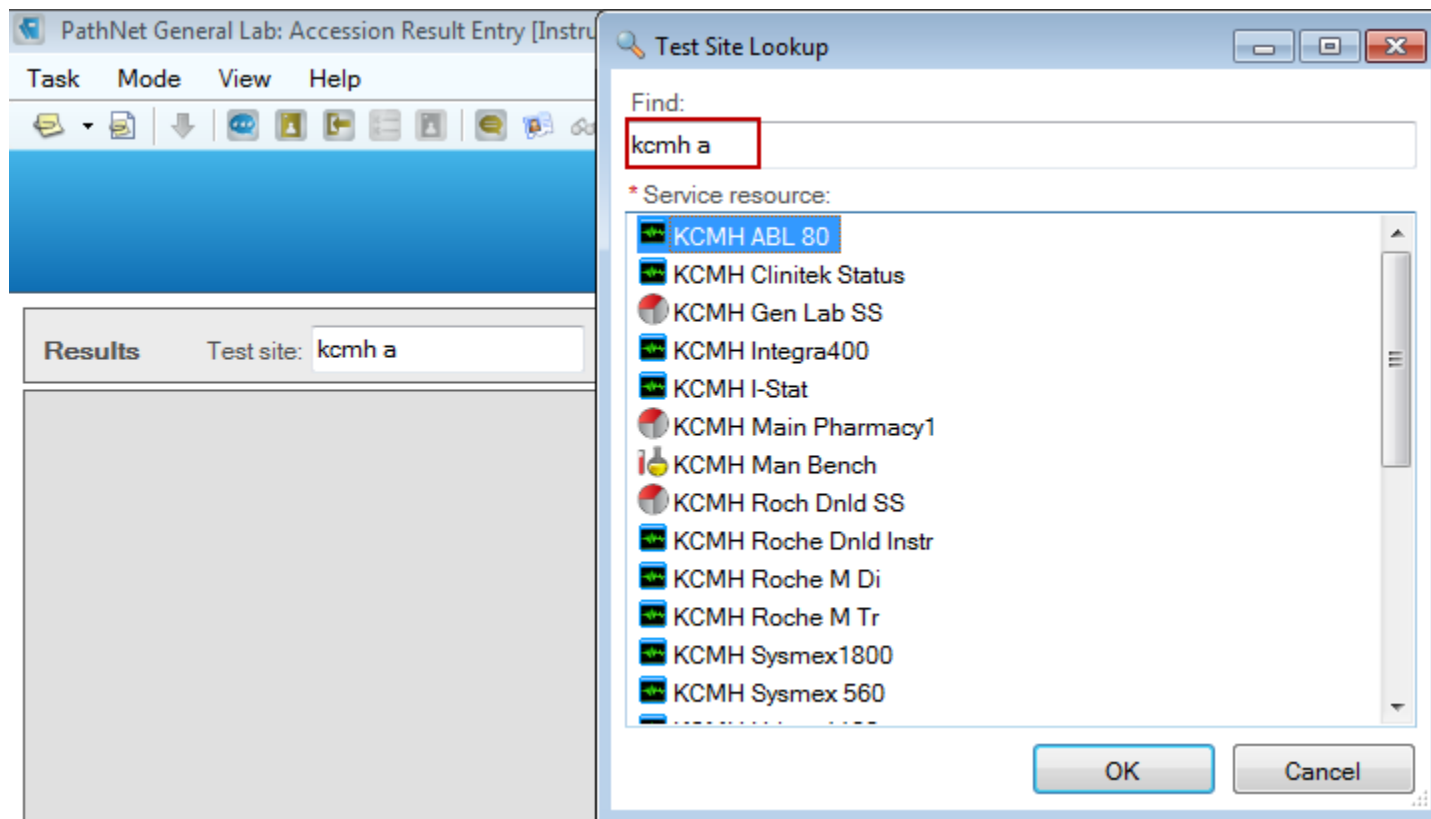

Accession Result Entry

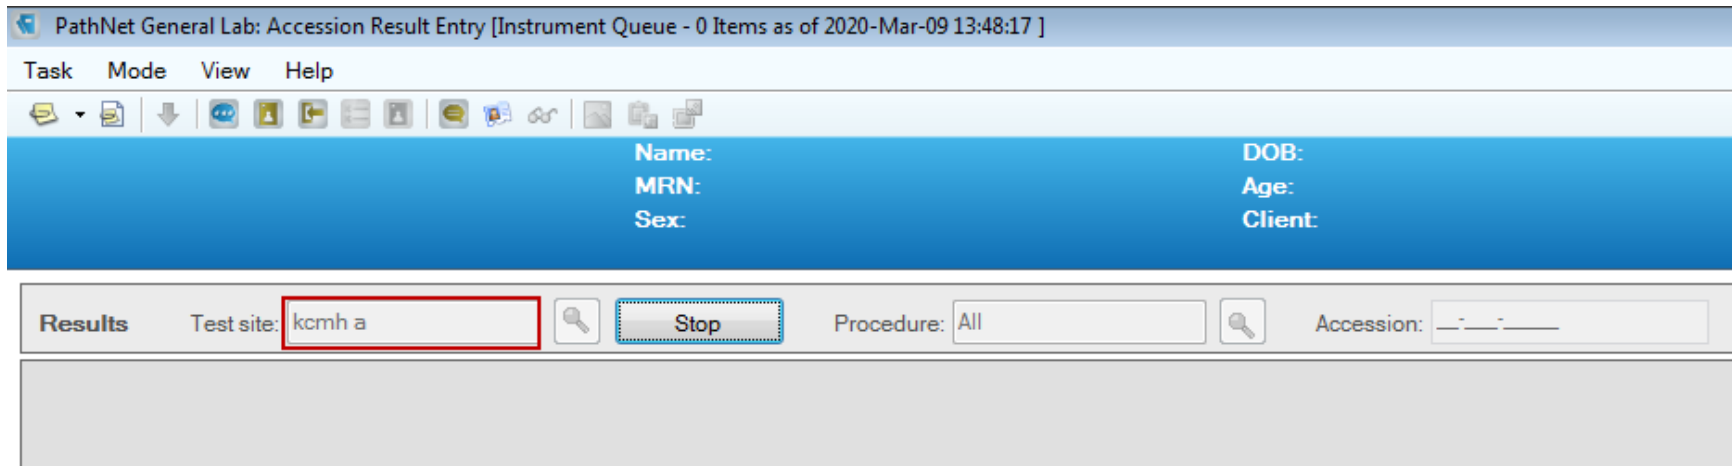

Instrument Queue Test Site display

With this enhancement, the entire instrument name will be displayed in instrument queue mode entry even if it is the only “best fit” option available

Before:

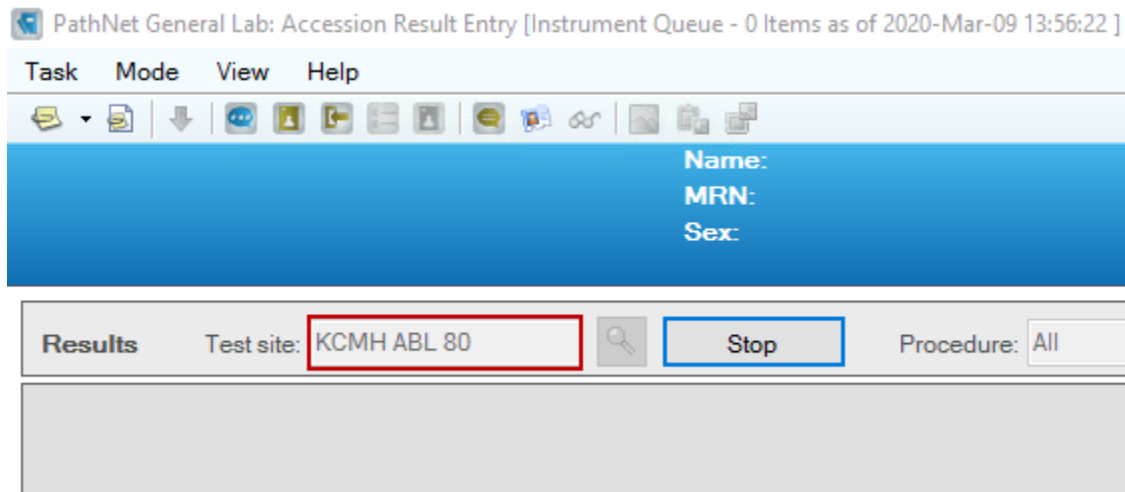

A end user does a quick search based on “KCMH A” rather than typing “KCMH ABL 80”

Only the searched for option will be displayed if only 1 option is returned

After:

Comment Viewer

Read-only option will no longer allow comment removal

When you open the Comment Viewer dialog box from all Genlab applications and place the cursor in the displayed text, the system previously allowed you to modify or remove comments. The Comment Viewer dialog box is read-only and the changes were not saved when you close the dialog box. The ability to make changes is no longer available

Before:

The screenshot displays the PathNet General Lab: Accession Result Entry interface. At the top, a blue header bar shows patient information: Name: ZZTEST, LOUISE; MRN: 888000736; Sex: Female; DOB: 1999-Jan-18; Age: 21 years; Client: Queen Elizabeth Hospital. Below this, a search bar shows Accession: 20-069-01608 and Procedure: All. A table lists results, with Phosphate highlighted. A Comment Viewer dialog box is open, showing a comment: Phosphate - Result Comment (JMGARRETT 2020-Mar-09 14:00): This is a comment. A red arrow points to the text 'This is a comment' in the dialog box.

Procedure	Result	Flags	Status	Reference Range	Service Resource Display	Prev	Time

Pending Inquiry

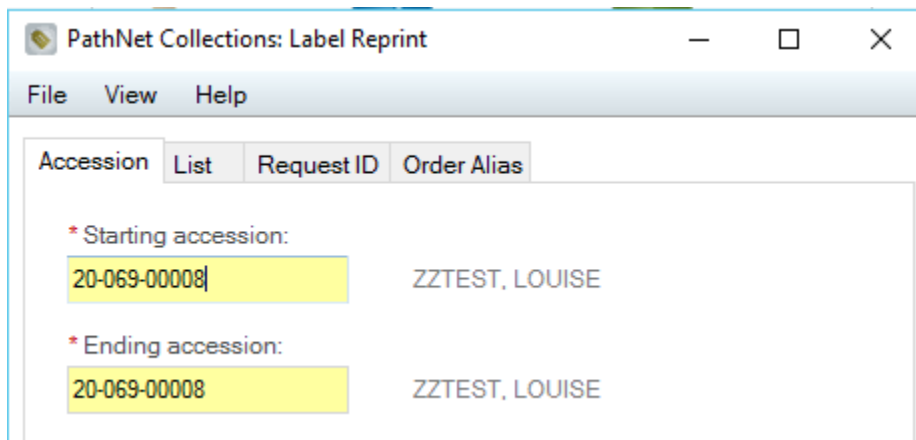

Customizing column display locations now behave correctly

Previously in Pending Inquiry, if you moved multiple columns and closed the application after saving, one or more customized columns may not have been displayed on the spreadsheet when you reopened Pending Inquiry. This issue should no longer occur.

Label Reprint

You no longer have to press ENTER or TAB for the system to populate the ending accession number.

Modify Collection

You can no longer modify collection time to after receive date/time

Previously you could modify a collected date and time on a sample to a time later than the specimen received date and time. This created issues when an accession add-on was conducted because the specimen received date and time could not be before the collected date and time.

Before:

The screenshot displays the 'PathNet Collections: Modify Collections' application window. At the top, there is a menu bar with 'Task', 'View', and 'Help'. Below the menu bar is a toolbar with icons for file operations. The main header area shows patient information: 'ZZTEST, LOUISE', 'Name: ZZTEST, LOUISE', 'MRN: 888000736', 'Sex: Female', 'DOB: 1999-Jan-18', 'Age: 21 years', and 'Client: Queen Elizabeth Hospital'. Below this is a 'Mode:' section with two radio buttons: 'Modify collections' (selected) and 'Mark collections to recollect'. The 'Collections' section shows an 'Accession number: 20-066-00629' and a 'Retrieve' button with a timestamp of '0 minutes ago'. A table lists the collections:

	Cont	Description	Order	...	Coll Date	Coll Time	Coll ID	Coll Method	Status
▲	A	3 L : Urine Jug	U24 Sodium		2020-Mar-06	09:24	RNCOLL	24 Hour Urine	Collected
▲	B	10 mL : Ur Aliq	U24 Sodium	...	2020-Mar-06	09:24	RNCOLL	24 Hour Urine	Collected

Below the table, a confirmation dialog box is open, titled 'PathNet Collections: Modify Collections'. It contains the text 'Are you sure you want to modify the collection information?' and two buttons: 'Yes' and 'No'.

After:

PathNet Collections: Modify Collections

Task View Help

ZZTEST, LOUISE Name: ZZTEST, LOUISE DOB: 1999-Jan-18

The specimen collected date and time (2020-Mar-06 9:20) cannot be after specimen received date and time (2020-Mar-06 8:51)

OK

Issues

Accession Result Entry

Cursor does not display on initial launch

Before:

The screenshot shows the 'PathNet General Lab: Accession Result Entry' application window. The title bar includes 'Task', 'Mode', 'View', and 'Help'. Below the title bar is a toolbar with various icons. The main content area is a blue header with labels: 'Name:', 'MRN:', 'Sex:', 'DOB:', 'Age:', and 'Client:'. Below this is a form with a 'Results' tab, an 'Accession:' field with a yellow highlight, a 'Retrieve' button, a 'Procedure:' field, and a 'Test site:' field. The cursor is not visible in the 'Accession:' field.

Cursor displays, you can start typing

After:

The screenshot shows the same application window as before, but now the cursor is visible in the 'Accession:' field. The rest of the interface, including the toolbar, blue header, and other form fields, remains the same.

Cursor does not display, but is active in the first cell

Error Message displayed on Scrolling

Steps to Recreate:

- Have **Order Result Viewer** open but not full screen
- Launch **Accession Result Entry** from toolbar in Order Result Viewer
- **Accession Result Entry** should also not be full screen
- Click your mouse cursor on your **Order Result Viewer** session
- Hoover your mouse over your **Accession Result Entry** session and scroll your mouse in scrollable section
- Error will fire
- Select Continue and proceed as normal
