

Placing a Lab Order

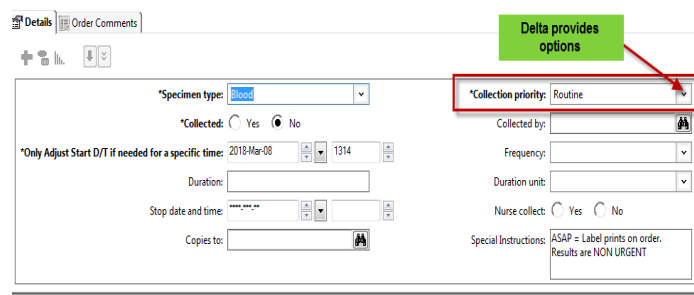

If you would like to place a single lab order, Click on the Add button, Select LAB Folder and then locate the required test or you. OR you can search for test by name ex. CBC

Lab has built folders to help enter multiple orders, these are called “Caresets” and contain multiple lab orders.

When you order lab test, you will always have a “details” box open. This is where you can modify if needed.

It is important that you select the correct “Collection Priority” as it will depend on when the specimen labels will print out for the nursing staff to draw the test.

Routine-- posted to next lab run
