

SAFETY TALK

HEART HEALTH AWARENESS

February is Heart Health Awareness Month

Heart Disease is a general term used to say that your heart is not working properly. You can be born with heart disease or it can develop overtime. There are many types of heart disease that can be prevented or improve with lifestyle changes.

Prevention is Key: 9 out of 10 Canadians have at least one risk factor. That is why a healthy lifestyle can make a big difference! Source: www.heartandstroke.ca

Some lifestyle changes that can improve your heart health:

Quit Smoking— PEI offers support to aid in smoking cessation

(<https://www.princeedwardisland.ca/en/information/health-and-wellness/smoking-cessation>).

Physical Activity— Any amount of activity is helpful. Start small and increase your goal over time.

Alcohol Use— Consider reducing your alcohol intake.

Eating Healthy— Start incorporating more vegetables into your diet. Talk to a dietician to improve your overall diet.

Check out the **Heart Health Month Campaign** the Health PEI Employee Wellness Team are promoting throughout the month of February!

Poster and calendar can be found on the **Health PEI Employee Wellness Team** page on the Staff Resource Centre [HERE](#).

Safety is everyone's responsibility!
