SAFETY TALK

SUN EXPOSURE & SAFETY

THE SUN'S RAYS ARE STRONGEST BETWEEN

11AM – 3PM

SEEK SHADE DURING THESE HOURS

Use sunscreen labelled "broad spectrum" with a sun protection factor (SPF) of at least 30 on skin not covered by clothing

Apply sunscreen generously and reapply after swimming, strenuous exercise or toweling off

Look for the Canadian Dermatology Association Sun Protection Recognition logo on sunscreen products

SUNSCREEN

ARE SUNSCREENS SAFE?

The safety of UV filters has been shown in an extensive program of toxicological studies. The benefits of sunscreen preventing skin cancer and aging have been well-studied and proven in large scientific medical studies of people in Australia followed for over 10 years.

[Government of Canada Sunscreen Tips Poster](#)

Ultraviolet (UV) Index

The ultraviolet (UV) index is a useful tool when it comes to sun protection. It was developed by Environment Canada to inform Canadians about the strength of the sun's ultraviolet radiation.

ALWAYS WEAR

UV-PROTECTIVE SUNGLASSES

Look for full UVA and UVB protection. The best protection is offered by close-fitting wraparound sunglasses

Sun exposure and hydration are closely linked, with sun exposure increasing the need for adequate hydration! Remember to drink plenty of fluids, especially water!

Each year there are over 80,000 new cases of **skin cancer** in Canada, making it the **most diagnosed type of cancer**. About 1/3 of all new cases of cancer in Canada are skin cancers. There are also over 1,500 deaths from skin cancer each year and rates are **increasing**.
