PEI Provincial EMR Notification

August 14, 2026

New Data Point Available: Return to FIT Testing

Under the Preventive Care field for Colonoscopy, please note that a new data point has been introduced: Return to FIT Testing.

This has been added to assist with the removal of patients who have been erroneously listed as non-compliant from the FIT Testing Delinquency Report, and to ensure that they are returned to the regularly scheduled screening for FIT Testing after the specified interval.

When updating the Preventive Care screening field for Colonoscopy, and where the endoscopist has recommended a return to FIT testing following a specified interval (months or years), this information can now be recorded in this field.

Please note that the interval must be expressed in the total number of months. Patients will not appear on the **FIT Testing Delinquency Report** until the recommended return-to-FIT-testing interval has elapsed.

Note: Please ensure the **Colonoscopy Date** field is completed, as this information is required for the return-to-FIT-testing calculations.

How to Navigate and Document:

Menu → Patient Data → Preventive Care → Colonoscopy

- Enter the **Colonoscopy Date** field is completed
- Enter the recommended Return to FIT Testing interval in the **Return to FIT** field (in total months) and save the record.

Recording the Return to FIT test field helps the EMR accurately track screening schedule and supports appropriate patient follow-up.
