July 2026

Historical Immunization Data Import for Provincial EMR

As part of the Public Health and Childhood Services onboarding to the Provincial EMR, historical immunization data from the Public Health Nursing legacy system (ISM) will begin importing into the Provincial EMR July 17th. This aligns with our eHealth goals of having a more comprehensive patient chart across the continuum of care in the community.

EMR users will now begin to see their patient charts updated to include immunizations that were administered and recorded by Health PEI Public Health Nursing. The data will NOT include immunizations that were administered elsewhere, such as at community pharmacies or other Provinces/countries. You may continue to refer to PHDMS (CPHO system) for the full immunization record history.

The data import will take place over a number of weeks as it is large in scale. The EMR Program will keep you informed about the progress of the addition of this historical immunization data.
