Redesigned Patient Chart Header

We're excited to announce that the redesigned patient chart header will be turned on for all users on **July 28th**! This update modernizes the interface, improves usability, and adds new functionality to enhance your workflow.

What's New

1. Collapsible Header

Click the arrow in the top-left corner, beside avatar to collapse the header for more screen space.

2. Updated Menu Button

The *Start/Open* button is now called **Menu**.

3. Reorder Menu Items

You can now drag and drop items within the **Menu** to customize the order.

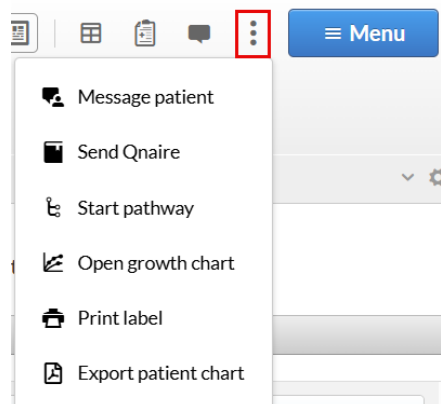

4. Hidden Sections Area

Move rarely used sections into **Hidden sections** at the bottom of the Menu.

5. More Actions (Kebab Menu)

A new **More actions** button next to Menu gives quick access to tools like *Message patient*, *Print label* and *Open growth chart*, and *Export patient chart*.

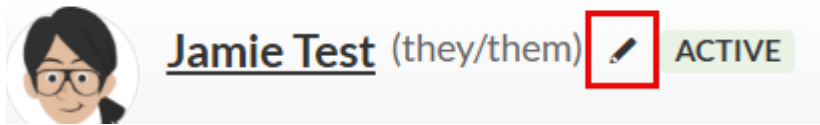

6. Start New Encounter Button

The **Start new encounter** button has been moved out of the Menu for true one-click access on the header.

7. Update Patient Information

A pencil icon beside the patient's name lets you update patient details without navigating to the Dashboard.

8. View Additional Identifications

Click the **More IDs** dropdown arrow next to the primary identification in the header to see all additional identification numbers.

9. Patient Status Button

Update patient status (None, Active, Walk-in, Inactive, Deceased, Unknown) directly from the header, beside the patient's name.

10. Patient Status tags

Important patient context now appears at a glance in the header.

Status Tags (+ Button) Use the + icon to add status tags to the chart. If tags already exist, click + to add more.

11. Latest Encounter Link

Quickly return to the most recent visit note using the new link showing the latest encounter date.

Note : Although the header looks different and some features have moved, all previous functionality remains available.
