

CHR Notification: PEI Provincial EMR Communication – April 4, 2025

New Analytics Dashboard Created

We have created a new dashboard in Analytics called Encounters. This dashboard will allow you to gather data on presenting issues, diagnosis, and more.

Embedded View

The EMR Program is currently piloting Embedded View Dashboard within patient charts that automatically calculates risk scores. Two clinics are piloting the Framingham score (10 year CVD risk) and FIB-4 score (scarring on the liver). We anticipate this feature to be available to all users in the near future.

Standard Operating Procedures on the SRC Website

We continue to create standard operating procedures for the Provincial EMR Program. Please note the following SOP's have been uploaded to the Staff Resource Site Health PEI

<https://src.healthpei.ca/emr>:

- Administrative Notes in the Provincial EMR
- Encounter Documentation by MOA in the Provincial EMR
- Appointment Types in the Provincial EMR
- Panel Identification and Maintenance
- Pharmacy Communications

Referral Letters and Forms

Did you know that there are many referral templates available in the Provincial EMR to streamline the referral process for both the sender and receiver. Please see the attached link

https://src.healthpei.ca/sites/src.healthpei.ca/files/e-Health/Referral_Forms_and_Letters_on_the_Provincial_EMR.pdf

New Qnaire Update

Please note the Violence Assessment Tool (VAT) is now available as a Qnaire on the Provincial EMR replacing the Violence Aggression Assessment Checklist (VAAC).
