PEI Provincial EMR Notification for all Users

April 27, 2026

Implementation beginning for Public Health Nursing and Childhood Development

The PEI EMR Program is pleased to announce the upcoming implementation of **Public Health Nursing and Childhood Development sites**.

Implementation Timeline

- **Week of April 27, 2026**
Implementation will begin with **Public Health Nursing Souris and Montague**.
- **Late May 2026**
Onboarding will begin with **Public Health Nursing Charlottetown**.
- **June 2026**
Onboarding will begin for **Public Health Nursing West and Summerside**.

What Does This Mean for You?

As additional sites come online, you can expect the following enhancements within the EMR:

1. **More comprehensive patient/client records**
Records will increasingly include **Public Health Nursing and Childhood Development clinical information**, improving continuity and completeness of care over time.
2. **Expanded immunization and injection records**
More **immunizations and injections** will appear in the **Injections** section as Public Health data is integrated.
3. **Enhanced Growth Chart data**
Additional data points will be added to the **Growth Chart**, supporting more complete tracking of patient growth and development.

Once **Public Health Nursing sites** are fully onboarded, the **PEI EMR Program** will begin the phased implementation of **Childhood Development services**, including:

- Community Nutrition
- Speech Language Pathology
- Audiology
- Pediatric Psychology
- Children with Complex Needs
- Hepatitis C Harm Reduction Program
- School Therapy Occupational Therapy
- School Age Physiotherapy
- Pediatric Occupational Therapy

This phased approach will ensure a smooth transition and support the gradual integration of Childhood Development clinical information into the EMR.
