

Pfizer XBB.1.5 Vaccine Information for Immunizers

COMIRNATY® Omicron XBB.1.5 for 12 years of age and older

COVID-19 mRNA vaccine, Monovalent (Omicron XBB.1.5), multidose vial (gray cap and label)

COMIRNATY Omicron XBB.1.5 is administered intramuscularly as a single dose of 0.3 mL, regardless of prior COVID-19 vaccination status. For individuals who have previously been vaccinated with a COVID-19 vaccine, COMIRNATY Omicron XBB.1.5 should be administered at least 6 months after the most recent dose of a COVID-19 vaccine or COVID-19 infection (whichever is later).

Vaccine is provided in Multiple Dose Vials: **DO NOT DILUTE**

The COMIRNATY Omicron XBB.1.5 multiple dose vial with a *gray cap and a gray label border* contains a volume of 2.25 mL and does not contain preservative. Vials of COMIRNATY Omicron XBB.1.5 is intended for individuals 12 years of age and older (gray cap/gray label border) and cannot be used to prepare doses for individuals aged 6 months to <12 years of age.

- Please ensure each vial is thawed prior to administration. Reminder **DO NOT DILUTE** prior to use.
- Vials may be thawed in the refrigerator (2°C to 8°C) or at room temperature (up to 25°C)
- The thawed suspension may contain white to off-white opaque amorphous particles.
- One multiple dose vial contains 6 doses of 0.3 mL.
- If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 mL, discard the vial and any excess volume.
- Low dead-volume syringes and/or needles can be used to extract 6 doses from a single vial. In order to ensure consistent withdrawal of 6 doses of 0.3 mL, it is important to adhere to minimizing volume loss during dose extraction.

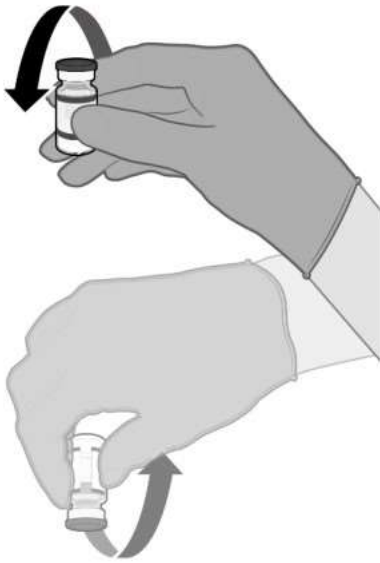

COMIRNATY Omicron XBB.1.5 For 12 Years of Age and Older: **DO NOT DILUTE** (Single Dose & Multiple Dose Vials with Gray Cap and Gray Label Border)

THAWING PRIOR TO USE

Can be stored
in the
refrigerator
(2°C to 8°C) for
up to 10 weeks
prior to use

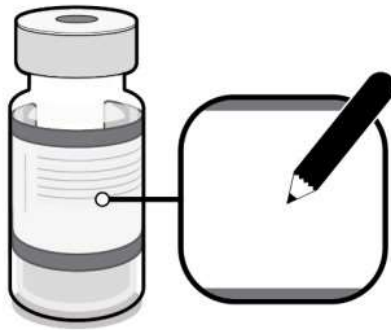

- Thaw single dose or multiple dose vial(s) of COMIRNATY Omicron XBB.1.5 before use either by:
 - Allowing vial(s) to thaw in the refrigerator [2°C to 8°C (35°F to 46°F)].
 - Single dose vials: A 10 vial pack of single dose vials may take 2 hours to thaw.
 - Multiple dose vials: A 10 vial pack of multiple dose vials may take 6 hours to thaw.
 - Allowing vial(s) to sit at room temperature [up to 25°C (77°F)] for 30 minutes.
- Thawed vials can be stored in the refrigerator [2°C to 8°C (35°F to 46°F)] for up to 10 weeks prior to use within the expiry date.
- Thawed vials may be stored at room temperature [up to 25°C (77°F)] for up to 12 hours prior to use.

Gently × 10

- Before use, mix by inverting vaccine vial gently 10 times.
- Do not shake.
- Prior to mixing, the thawed vaccine may contain white to off-white opaque amorphous particles.
- After mixing, the vaccine should appear as a white to off-white suspension with no visible particles.
- Do not use if liquid is discoloured or if particles are observed after mixing.

**COMIRNATY Omicron XBB.1.5 For 12 Years of Age and Older: DO NOT DILUTE
(Single Dose & Multiple Dose Vials with Gray Cap and Gray Label Border)**

**Record the discard time on the vial label.
Use within 12 hours after first puncture.**

Multiple Dose Vial Only:

- Store between 2°C to 25°C (35°F to 77°F).
- Discard any unused vaccine 12 hours after first puncture. Record the discard time on the vial label.

Vials must be discarded 12 hours after first puncture
