

## Patient Safety

Patient Safety is a very important part of the Accreditation Canada standards. Some of the questions you may be asked when the surveyors are at our facility (September 25-29, 2017) are: "How do you report a safety problem? What changes have been made to improve patient safety in your organization?" Patient safety issues are reported through incident reports which help to improve patient safety through quality improvement. Try to think of three things in your opinion that have contributed to a safer patient environment. If you have any questions or concerns please contact a member of the Quality Team.
