WEEK OF - APRIL 25TH, 2022

The following solution areas have updates:

Order Sets - Page 2

PowerChart, FirstNet & SurgiNet - Pages 3 - 4

Lab - Pages 4 - 5

UPCOMING EVENTS

There are no upcoming events in CIS

Privacy Matters Corner…

When printing documents from a Patient's Chart…….

♦ Check that you have selected and are mapped to the right printer

♦ Use the locked print feature so patient info is not sitting on the printers/don't leave documents unattended (there is a Tip Tuesday about this)

♦ Ensure that you have the proper safeguards in place to protect patient info (location of printer & storage of info)

♦ Follow proper RIM protocol for retention/disposal of records.

PowerChart/FirstNet/SurgiNet Updates: (continued)

New Notes Types for Physician Documentation:

PCU Progress Note and PCU Physician Transfer Progress Note.

The notes will post under the Progress Note Folder on the Documents tab.

Lab Update:

Hemophiliac Patient Alert for the first time a coagulation test ordered on patient:

Several medications taken by hemophiliacs, including Hemilibra, can not only invalidate coagulation results on that patient sample, but there is also the potential carry-over into subsequent patient samples. The Hemophiliac Patient Alert order, if selected, will attach to the coagulation order being requested and will be posted to the lab Pending Lists, TAT boards and in the Accession Result Entry field. This post will notify the lab staff that this is a hemophiliac sample. These samples will be sequestered for testing and additional cleaning performed.

The alert is used to identify people that are new to the system and will only fire once on a patient if they match the following criteria:

1. A coagulation order is being placed
2. This is the first encounter found on the patient in the system

This will occur when they are an out of province patient or a patient who has just received a PEI health card .

Health PEI
CLINICAL INFORMATION SYSTEMS

Lab Update: (continued)

If there is already a patient encounter in the system, the pop up should not fire. Once the Hemophiliac Patient Alert order has been added to a patient and verified, rules will add the Hemophiliac Patient Alert order on any subsequent coagulation orders for the patient when the specimen is logged into the lab. For any known hemophiliac patients, the Hemophiliac Patient Alert order will be initially be added through DOE.
